Important information about the results and the final ranking of the teams

1. **Marinis et al.** in the 2D category was **not** considered for the awards. The system required a significantly different evaluation process compared to the official one. The team required to go over specific evaluation points multiple times, and to also record the exact evaluation point they were at, at any given time. Given that no other teams followed this process, this team was not included in the awards.
