

RIEGL VMQ-1HA

Use the latest advancements in RIEGL LiDAR Technology for your mobile applications:
1.8 MHz effective measurement rate
250 scan lines/sec

The RIEGL VMQ-1HA is a compact, economically priced High-Speed Single Scanner Mapping System, well suited for a variety of mobile mapping applications.

The system consists of a compact measuring head with a quick release system for convenient mounting. A swivel plate enables multiple mounting angles in order to optimize the field of view of the system. The optional integration of up to four cameras allows simultaneous acquisition of imagery to complement the captured LiDAR data.

The central part of the system is the fully integrated RIEGL VUX-1HA²² LiDAR sensor providing 1.8 mio. measurements and up to 250 scan lines per second for an outstanding performance in mobile applications.

High Speed Single Scanner Mobile Mapping System

Typical Applications

- Transportation Infrastructure Mapping
- Road Surface Measurement
- HD Mapping for Autonomous Vehicles
- City Modeling
- Rapid Capture of Construction Sites and Bulk Material
- Open-Pit Mine Surveying
- GIS Mapping and Asset Management
- As-Built Surveying

Key Features

• **RIEGL High-Performance LiDAR Sensor for Mobile Mapping**

Core component of the *RIEGL* VMQ-1HA is the **kinematic LiDAR Sensor VUX-1HA²²**. Especially developed for mobile applications, the high-accuracy, high-speed laser scanner offers a maximum effective measurement rate of up to 1.8 MHz, 5 mm accuracy, 250 scan lines/sec, and a 360 degree "full circle" field of view.

Fully integrated into the measuring head of the VMQ-1HA, the sensor enables acquisition of dense point cloud patterns even with single passes at common traffic speeds. At 80 km/h acquisition speed the typical average point density is about 9 cm line spacing and 4 mm point spacing on the road surface.

• **Multiple Swivel Positions**

By means of the swivel plate the measuring head can be set to seven different pre-defined mounting angles (-45° to +45° in 15° increments). This flexible system configuration allows the generation of different point cloud patterns meeting diverse project requirements. The possibility of scan data acquisition with different horizontal orientation of the measuring head improves the scan pattern especially for multi-pass applications.

• **System Operation**

The VMQ-1HA is powered via the VM Power Supply Box. It provides power for the VMQ-MH Measuring Head, the DMI, and either for the VM-IU Interface Unit, or a data acquisition laptop. The VM Power Supply Box enables failsafe operation by redundant power input from the vehicles on-board power supply and a backup battery.

The VM-IU is a compact data acquisition unit for convenient system operation. It provides extended disk space to store scan data as well as camera data from the *RIEGL* cameras (GigE-vision cameras) and the FLIR Ladybug[®]5+.

Optionally the system can also be operated with a user laptop instead of the VM-IU, if no *RIEGL* cameras are used.

• **Seamless *RIEGL* Workflow**

A handy touch-screen and the *RIEGL* data acquisition software facilitate the operator's task in the field by providing real-time visualization of acquired scan data and imagery. The *RIEGL* software packages also offer comprehensive features in data processing. This covers enhanced scan data adjustment to merge overlapping mobile scan data. Furthermore it enables the scan data to be fitted to specific control objects which results in a consistent point cloud of enhanced precision and increased geo-referenced accuracy. Finally, the precise geo-referenced scan data and high resolution (panorama) images can be exported to well-known file formats, or interfaced directly with third-party software.

RIEGL VMQ-1HA System Block Diagram

RIEGL VMQ-1HA System Components:

- RIEGL VMQ-MH Measuring Head
- RIEGL VM-IU Interface Unit
- RIEGL VM Power Supply Box
- VM-DMI Distance Measurement Indicator
- up to 4 cameras (optional)
- sustainable power supply with back-up battery
- connecting cables

RIEGL VMQ-1HA Setup and Components

Physical Data

	Main Dimensions (L x W x H)	Weight (approx.)
VMQ-MH Measuring Head	496 x 387 x 507 mm	18 kg
VMQ-RM Roof Mount	1149 x 440 x 110 mm	9 kg
Mounting Frame	568 x 514 x 70 mm	13 kg
VM Power Supply Box	415 x 330 x 175 mm	7.8 kg
VM-IU Interface Unit	550 x 353 x 230 mm	14.8 kg
VMQ-MC Main Cable	standard length 5 m	8 kg

RIEGL VMQ-1HA Camera Options

A wide range of cameras can be used with the system including 5-megapixel and 12-megapixel *RIEGL* cameras with GigE vision interface for seamless integration into the entire acquisition and processing workflow. Cameras such as high resolution DSLR cameras up to 45-megapixel or the FLIR Ladybug®5+ spherical imaging system can also be integrated to the seamless *RIEGL* workflow.

RIEGL cameras

The cameras are available with different resolutions and lens types. For further details please refer to the table below.

RIEGL VMQ-1HA system
with 2x RIEGL cameras, 1x Nikon D850 and 1x FLIR Ladybug®5+

Camera Options ¹⁾	max. numbers of cameras	max. frames ²⁾ per second	resolution [px (H) x px (V)]	pixel size [μm]	lens focal length [mm]	Field of View (FOV)
5 MP CMOS ^{3) 4)}	2	20	2464 x 2056	3.45	5	80.7° x 70.7°
12 MP CMOS ^{3) 4)}	2	8	4112 x 3008	3.45	8 / 16	83.1° x 65.9° / 47.8° x 35.9°
FLIR Ladybug®5+ ⁵⁾	1 unit / 6 lens	19	6 x [2048x2448]	3.45	4.4	90% of full sphere
Nikon® D850	4	1	8256 x 5504	4.34	14 / 20	104° x 81° / 83° x 61°

¹⁾ The combination of different cameras is possible. A maximum of 4 cameras can be integrated with the system.

²⁾ Maximum frame rate of a single camera operated in 8-bit mode. The use of multiple cameras may reduce maximum frame rates.

³⁾ A user defined "Region of Interest" can be defined during data acquisition, resulting in a reduction of the FOV and the resolution. This may help to reduce image file sizes on the one hand and to further increase frame rates on the other hand.

⁴⁾ The *RIEGL* cameras require the usage of the VM-IU Interface Unit.

⁵⁾ This cameras can also be used with a data acquisition laptop instead of the VM-IU Interface Unit.

VMQ-1HA Scanner Performance

Laser Class	Laser Class 1 (Class 1 Laser Product according to IEC 60825-1:2014)					
Effective Measurement Rate ^{1) 2)}	300 kHz	500 kHz	1000 kHz	1250 kHz	1500 kHz	1800 kHz
Max. Range, Target Reflectivity $\rho \geq 80\%$ ^{3) 4)}	475 m	370 m	235 m	235 m	235 m	235 m
Max. Range, Target Reflectivity $\rho \geq 10\%$ ^{3) 4)}	170 m	130 m	85 m	85 m	85 m	85 m
Max. Number of Targets per Pulse ⁵⁾	15	15	9	7	5	4
Minimum Range	1 m @ PRR $\geq$ 1 MHz, 1.2 m @ PRR < 1 MHz					
Accuracy ^{6) 7)} / Precision ^{7) 8)}	5 mm / 3 mm					
Field of View	360° "full circle"					
Scan Speed (selectable)	up to 250 scans/sec					

1) Rounded values, selectable by measurement program.

2) Setting of intermediate PRR values possible.

3) Typical values for average conditions. Maximum range is specified for flat targets with size in excess of the laser beam diameter, perpendicular angle of incidence, and for atmospheric visibility of 23 km. In bright sunlight, the max. range is shorter than under overcast sky.

4) Ambiguity to be resolved by post-processing with RIUNITE software.

5) If more than one target is hit, the total laser transmitter power is split and, accordingly, the achievable range is reduced.

6) Accuracy is the degree of conformity of a measured quantity to its actual (true) value.

7) One sigma @ 30 m range under RIEGL test conditions.

8) Precision, also called reproducibility or repeatability, is the degree to which further measurements show the same result.

IMU/GNSS Performance ⁹⁾	IMU (Option A)	IMU (Option B)
Position Accuracy (absolute)	typ. 20 - 50 mm	typ. 20 - 50 mm
Roll & Pitch Accuracy	0.015°	0.005°
Heading Accuracy	0.05° / 0.025° ¹⁰⁾	0.015°

9) One sigma values, no GNSS outage, with DMI option, post-processed using base station data.

10) Improved heading accuracy with dual antenna option @ 2 m baseline.

Electrical Data

Power Supply Input Voltage	11 - 15 V DC
Power Consumption	typ. 160 W (max. 220 W) ¹¹⁾

11) with 2 x 12 MP camera

Interfaces

Interfaces Measuring Head (VMQ-MH)	VM Power Supply Box	Interface Unit (VM-IU)
4 x trigger pulse, exposure pulse, NMEA data (e.g. for optional cameras or additional devices) 1 x PPS out pulse for synchronization of additional device 2 x LAN, 1000 Mbit/sec for data transfer to control unit of external devices (e.g. image data acquisition) 1 x secondary antenna connector for GPS azimuth measurement subsystem	1x DMI input (for distance measuring indicator; odometer) 1x NAV RS-232 (COM port for IMU/GNSS for RTK, SBAS) 3x power supply socket (2x 24V / 1x 12V)	4x LAN 1Gbit/sec M12 sockets, 3 ports pre-configured 4x LAN 1Gbit/sec RJ45 sockets, 2 ports pre-configured 4x USB 3.0 (e.g. image data transfer from FLIR Ladybug®5+) 1x display port 1x WLAN (integrated antenna) 1x Bluetooth (integrated antenna) 2x slots for removable hard disk 1x power supply input (+24V DC) 1x power supply output (+24V DC) for display (touchscreen)
